Not illustrated. 1873 Excerpt: . latter purpose alone the lathe is quite indispensable to the Millwright or the Engineer, since by means of it--when at least it is provided with the automatic arrangement, which will hereafter be described--he is enabled to produce screws of any required diameter, or of very great length, with an amount of speed and accuracy quite unattainable by the methods previously mentioned. In its original form the lathe was doubtless a very simple affair, probably differing but little from the old pole-lathe, which may still now and then be met with in a village carpenter s shop. Fig. 97 shows the principle of its construction, and renders intelligible how, without any metalwork whatever with the exception of the two dead centre screws and a tool-rest (the latter omitted in the Fig.), it is possible to construct a lathe which would at least render much assistance in...
